8. Qualifier: (e.g.: error, omission, clarification required)

Error

9. References in Document: (e.g.: page, clause/section, figure, and/or table numbers)

14.5

15.3.1

19.3.1.1.3

10. Nature of Defect: (complete, concise explanation of the perceived problem)

14.5 that there is a hierarchical operational binding and/or a non-hierarchical binding depending on the type of knowledge reference held by the subordinate DSA. It must be the superior DSA.

It is not clear that the DAP part of a DSP shall not be changed.

15.5.2, last paragraph, indicates that a DSA shall never process an extension. It also talks about *execution* phase.

19.3.1.1.3 list errors for the List operation. It lists two unknown errors and indicate that alias is performed as part of the List evaluation. The procedure for Search does include such a list of errors.

11. Solution Proposed by the Source: (optional)

In 14.5, first paragraph, replace subordinate DSA with superior DSA.

Add a new paragraph and a note to the end of 15.3.1:

The **argument** of a chained request (see 12.1) or subrequest shall be the unmodified operation argument if the operation was initiated by a DUA. A DSA receiving a chained request shall not change **argument** when doing request decomposition.

NOTE – The following subclauses specifies that requirement for individual components of **argument**. This should not be interpreted to mean that component not explicitly mentioned can be changed.

In the start of the last paragraph of 15.5.5, add after "If a DSA encounters an extension": it does not support. Change execution phase to evaluation phase.

Delete 19.3.1.1.3.

12. Editor's Response:

(any material proposed for processing as an erratum to, an amendment to, or a commentary on the IS or DIS final text/ITU Recommendation or Draft Recommendation is attached separately to this completed report).
