

# Package ‘fastRhockey’

October 25, 2022

**Title** Functions to Access Premier Hockey Federation and National Hockey League Play by Play Data

**Version** 0.4.0

**Description** A utility to scrape and load play-by-play data and statistics from the Premier Hockey Federation (PHF) <<https://www.premierhockeyfederation.com/>>, formerly known as the National Women's Hockey League (NWHL). Additionally, allows access to the National Hockey League's stats API <<https://www.nhl.com/>>.

**License** MIT + file LICENSE

**URL** <https://fastRhockey.sportsdataverse.org/>,  
<https://github.com/sportsdataverse/fastRhockey>

**BugReports** <https://github.com/sportsdataverse/fastRhockey/issues>

**Depends** R (>= 4.0.0)

**Imports** cli (>= 3.0.0), data.table, dplyr, glue, httr, janitor, jsonlite, lubridate, magrittr, progressr (>= 0.6.0), purrr (>= 0.3.0), Rcpp, RcppParallel, rlang, rvest (>= 1.0.0), stringr (>= 1.3.0), tibble (>= 3.0), tidyr (>= 1.0.0)

**Suggests** crayon (>= 1.3.4), curl, DBI, furrr, future, ggplot2, ggrepel, qs (>= 0.25.1), rmarkdown, RSQLite, stringi, stats, testthat, usethis (>= 1.6.0), xml2 (>= 1.3)

**Encoding** UTF-8

**RoxygenNote** 7.2.1

**Config/testthat/edition** 3

**LazyData** true

**NeedsCompilation** no

**Author** Ben Howell [aut],  
Saiem Gilani [cre, aut],  
Alyssa Longmuir [ctb]

**Maintainer** Saiem Gilani <[saiem.gilani@gmail.com](mailto:saiem.gilani@gmail.com)>

**Repository** CRAN

**Date/Publication** 2022-10-25 20:55:15 UTC

---

<code>csv_from_url</code>	<b>Load .csv / .csv.gz file from a remote connection</b>
---------------------------	--

---

### Description

This is a thin wrapper on `data.table::fread`

### Usage

```
csv_from_url(...)
```

### Arguments

...                    passed to `data.table::fread`

### Value

a dataframe as created by `data.table::fread()`

---

<code>data</code>	<b>Data in the package for reference</b>
-------------------	--

---

### Description

A dataset containing the full team names, abbreviations, colors & logos for all 32 NHL teams.

A dataset containing the full team names, abbreviations, colors & logos for all PHF teams.

### Usage

```
nhl_team_logos
```

```
phf_team_logos
```

**Format**

A data frame with 32 rows and 11 variables:

**full\_team\_name** full team name  
**team\_abbr** NHL.com team abbreviation  
**team\_nick** lowercase, no spaces team nickname  
**division** current NHL division  
**conference** current NHL conference  
**team\_logo\_espn** primary team logo from ESPN.com  
**team\_color1** current primary team color  
**team\_color2** current secondary team color  
**team\_logo\_alternate** alternate or throwback logo  
**team\_color\_alt1** alternate logo primary color  
**team\_color\_alt2** alternate logo secondary color

A data frame with 6 rows and 7 variables:

**full\_team\_name** Full team name  
**team\_abbr** PremierHockeyFederation.com team abbreviation  
**team\_nick** Team Nickname  
**team\_location** PHF team location  
**team\_color1** Current primary team color. Full disclosure, I just color picked from the logos  
**team\_color2** Current secondary team color. Full disclosure, I just color picked from the logos  
**team\_logo** Primary team logo from fastRhockey data repository

---

espn\_nhl\_teams

**Get ESPN NHL team names and IDs**

---

**Description**

**Get ESPN NHL team names and IDs**

**Usage**

espn\_nhl\_teams()

**Value**

A teams data frame with the following columns:

col_name	types
espn_team_id	integer
abbreviation	character
display_name	character
short_name	character
mascot	character
nickname	character
team	character
color	character
alternate_color	character
logo	character
logo_dark	character
logos_href_3	character
logos_href_4	character

**Author(s)**

Saiem Gilani

**Examples**

```
try(espn_nhl_teams())
```

---

load\_nhl\_pbp

**Load fastRhockey NHL play-by-play**

---

**Description**

helper that loads multiple seasons from the data repo either into memory or writes it into a db using some forwarded arguments in the dots

**Usage**

```
load_nhl_pbp(  
  seasons = most_recent_nhl_season(),  
  ...,  
  dbConnection = NULL,  
  tablename = NULL  
)
```

**Arguments**

seasons	A vector of 4-digit years associated with given NHL seasons. (Min: 2011)
...	Additional arguments passed to an underlying function that writes the season data into a database (used by <code>update_nhl_db()</code> ).
dbConnection	A DBIConnection object, as returned by <a href="#">DBI::dbConnect()</a>
tablename	The name of the play by play data table within the database

**Value**

A dataframe

**Examples**

```
try(load_nhl_pbp(2021))
```

---

load\_nhl\_player\_box    **Load fastRhockey NHL player box scores**

---

**Description**

helper that loads multiple seasons from the data repo either into memory or writes it into a db using some forwarded arguments in the dots

**Usage**

```
load_nhl_player_box(
  seasons = most_recent_nhl_season(),
  ...,
  dbConnection = NULL,
  tablename = NULL
)
```

**Arguments**

seasons	A vector of 4-digit years associated with given NHL seasons. (Min: 2011)
...	Additional arguments passed to an underlying function that writes the season data into a database (used by <code>update_nhl_db()</code> ).
dbConnection	A DBIConnection object, as returned by <a href="#">DBI::dbConnect()</a>
tablename	The name of the player box data table within the database

**Value**

Returns a tibble

## Examples

```
try(load_nhl_player_box(2021))
```

---

load_nhl_schedule	<b>Load fastRhockey NHL schedules</b>
-------------------	---------------------------------------

---

## Description

helper that loads multiple seasons from the data repo either into memory or writes it into a db using some forwarded arguments in the dots

## Usage

```
load_nhl_schedule(  
  seasons = most_recent_nhl_season(),  
  ...,  
  dbConnection = NULL,  
  tablename = NULL  
)
```

## Arguments

seasons	A vector of 4-digit years associated with given NHL seasons. (Min: 2011)
...	Additional arguments passed to an underlying function that writes the season data into a database (used by <code>update_nhl_db()</code> ).
dbConnection	A <code>DBIConnection</code> object, as returned by <code>DBI::dbConnect()</code>
tablename	The name of the schedule data table within the database

## Value

Returns a tibble

## Examples

```
try(load_nhl_schedule(2021))
```

---

load_nhl_team_box	<b>Load fastRhockey NHL team box scores</b>
-------------------	---

---

### Description

helper that loads multiple seasons from the data repo either into memory or writes it into a db using some forwarded arguments in the dots

### Usage

```
load_nhl_team_box(
  seasons = most_recent_nhl_season(),
  ...,
  dbConnection = NULL,
  tablename = NULL
)
```

### Arguments

seasons	A vector of 4-digit years associated with given NHL seasons. (Min: 2011)
...	Additional arguments passed to an underlying function that writes the season data into a database (used by <code>update_nhl_db()</code> ).
dbConnection	A DBIConnection object, as returned by <a href="#">DBI::dbConnect()</a>
tablename	The name of the team box data table within the database

### Value

Returns a tibble

### Examples

```
try(load_nhl_team_box(2021))
```

---

load_phf_pbp	<b>Load fastRhockey PHF play-by-play</b>
--------------	--

---

### Description

helper that loads multiple seasons from the data repo either into memory or writes it into a db using some forwarded arguments in the dots

**Usage**

```
load_phf_pbp(  
  seasons = most_recent_phf_season(),  
  ...,  
  dbConnection = NULL,  
  tablename = NULL  
)
```

**Arguments**

seasons	A vector of 4-digit years associated with given PHF seasons. (Min: 2011)
...	Additional arguments passed to an underlying function that writes the season data into a database (used by <code>update_phf_db()</code> ).
dbConnection	A <code>DBIConnection</code> object, as returned by <code>DBI::dbConnect()</code>
tablename	The name of the play by play data table within the database

**Value**

A dataframe

**Examples**

```
try(load_phf_pbp(2021))
```

---

load\_phf\_player\_box    **Load fastRhockey PHF player box scores**

---

**Description**

helper that loads multiple seasons from the data repo either into memory or writes it into a db using some forwarded arguments in the dots

**Usage**

```
load_phf_player_box(  
  seasons = most_recent_phf_season(),  
  ...,  
  dbConnection = NULL,  
  tablename = NULL  
)
```

**Arguments**

seasons	A vector of 4-digit years associated with given PHF seasons. (Min: 2011)
...	Additional arguments passed to an underlying function that writes the season data into a database (used by update_phf_db()).
dbConnection	A DBIConnection object, as returned by <a href="#">DBI::dbConnect()</a>
tablename	The name of the player box data table within the database

**Value**

Returns a tibble

**Examples**

```
try(load_phf_player_box(2021))
```

---

load\_phf\_schedule

**Load fastRhockey PHF schedules**

---

**Description**

helper that loads multiple seasons from the data repo either into memory or writes it into a db using some forwarded arguments in the dots

**Usage**

```
load_phf_schedule(
  seasons = most_recent_phf_season(),
  ...,
  dbConnection = NULL,
  tablename = NULL
)
```

**Arguments**

seasons	A vector of 4-digit years associated with given PHF seasons. (Min: 2011)
...	Additional arguments passed to an underlying function that writes the season data into a database (used by update_phf_db()).
dbConnection	A DBIConnection object, as returned by <a href="#">DBI::dbConnect()</a>
tablename	The name of the schedule data table within the database

**Value**

Returns a tibble

## Examples

```
try(load_phf_schedule(2021))
```

---

load_phf_team_box	<b>Load fastRhockey PHF team box scores</b>
-------------------	---

---

## Description

helper that loads multiple seasons from the data repo either into memory or writes it into a db using some forwarded arguments in the dots

## Usage

```
load_phf_team_box(  
  seasons = most_recent_phf_season(),  
  ...,  
  dbConnection = NULL,  
  tablename = NULL  
)
```

## Arguments

seasons	A vector of 4-digit years associated with given PHF seasons. (Min: 2011)
...	Additional arguments passed to an underlying function that writes the season data into a database (used by <code>update_phf_db()</code> ).
dbConnection	A DBIConnection object, as returned by <code>DBI::dbConnect()</code>
tablename	The name of the team box data table within the database

## Value

Returns a tibble

## Examples

```
try(load_phf_team_box(2021))
```

---

most\_recent\_nhl\_season

**Most Recent NHL Season**

---

**Description**

**Most Recent NHL Season**

**Usage**

most\_recent\_nhl\_season()

**Value**

Value for most recent NHL season

---

most\_recent\_nhl\_season\_api\_param

**Most Recent NHL Season for NHL API**

---

**Description**

**Most Recent NHL Season for NHL API**

**Usage**

most\_recent\_nhl\_season\_api\_param()

**Value**

Value for most recent NHL season in the format of the NHL API

---

most\_recent\_phf\_season

**Most Recent PHF Season**

---

**Description**

**Most Recent PHF Season**

**Usage**

most\_recent\_phf\_season()

**Value**

Value for most recent NHL season

---

nhl_conferences	<b>NHL Conferences</b>
-----------------	------------------------

---

**Description**

Returns a table of current NHL conferences

**Usage**

```
nhl_conferences()
```

**Value**

Returns a data frame

- conference\_id - conference ID
- name - conference name
- link - link to conference information
- abbreviation - conference abbreviation
- short\_name - conference short name
- active - active conference flag

**Examples**

```
try(nhl_conferences())
```

---

nhl_conferences_info	<b>NHL Conference Info</b>
----------------------	----------------------------

---

**Description**

Returns information on a conference by conference ID

**Usage**

```
nhl_conferences_info(conference_id)
```

**Arguments**

conference\_id Conference ID

**Value**

Returns a data frame

- conference\_id - conference ID
- name - conference name
- link - link to conference information
- abbreviation - conference abbreviation
- short\_name - conference short name
- active - active conference flag

**Examples**

```
try(nhl_conferences_info(conference_id = 7))
```

---

nhl\_divisions

**NHL Divisions**

---

**Description**

Returns information on divisions

**Usage**

```
nhl_divisions()
```

**Value**

Returns a data frame

- division\_id -
- name -
- name\_short -
- link -
- abbreviation -
- active -
- conference\_id -
- conference\_name -
- conference\_link -

**Examples**

```
try(nhl_divisions())
```

---

nhl_divisions_info	<b>NHL Divisions Info</b>
--------------------	---------------------------

---

**Description**

Returns information on a division by division ID

**Usage**

```
nhl_divisions_info(division_id)
```

**Arguments**

division\_id     Division ID

**Value**

Returns a data frame

- division\_id -
- name -
- name\_short -
- link -
- abbreviation -
- active -
- conference\_id -
- conference\_name -
- conference\_link -

**Examples**

```
try(nhl_divisions_info(division_id=17))
```

---

 nhl\_draft

**NHL Draft**

---

**Description**

Returns information on draft

**Usage**

```
nhl_draft()
```

**Value**

Returns a data frame: \* year - \* round - \* pick\_overall - \* pick\_in\_round - \* team\_id - \* team\_name - \* team\_link - \* prospect\_id - \* prospect\_full\_name - \* prospect\_link -

**Examples**

```
try(nhl_draft())
```

---

 nhl\_draft\_prospects

**NHL Draft Prospects**

---

**Description**

Returns information on draft prospects

**Usage**

```
nhl_draft_prospects()
```

**Value**

Returns a tibble with the following columns:

col_name	types
prospect_id	integer
full_name	character
link	character
first_name	character
last_name	character
birth_date	character
birth_city	character
birth_country	character

height	character
weight	integer
shoots_catches	character
nhl_player_id	integer
draft_status	character
birth_state_province	character
primary_position_code	character
primary_position_name	character
primary_position_type	character
primary_position_abbreviation	character
prospect_category_id	integer
prospect_category_short_name	character
prospect_category_name	character
amateur_team_name	character
amateur_team_link	character
amateur_league_name	character
amateur_league_link	character
ranks_midterm	integer
ranks_final_rank	integer
ranks_draft_year	integer

**Examples**

```
try(nhl_draft_prospects())
```

---

```
nhl_draft_prospects_info
```

**NHL Draft Prospects Info**

---

**Description**

Returns information on draft prospect for a given prospect id

**Usage**

```
nhl_draft_prospects_info(prospect_id)
```

**Arguments**

`prospect_id` Prospect unique ID

**Value**

Returns a data frame: \* prospect\_id - \* full\_name - \* link - \* first\_name - \* last\_name - \* birth\_date - \* birth\_city - \* birth\_country - \* nationality - \* height - \* weight - \* shoots\_catches - \* nhl\_player\_id - \* primary\_position\_code - \* primary\_position\_name - \* primary\_position\_type - \* primary\_position\_abbreviation - \* prospect\_category\_id - \* prospect\_category\_short\_name - \* prospect\_category\_name - \* amateur\_team\_link - \* amateur\_league\_link -

**Examples**

```
try(nhl_draft_prospects_info(prospect_id=65242))
```

---

nhl_draft_year	<b>NHL Draft by Year</b>
----------------	--------------------------

---

**Description**

Returns information on draft for a given year

**Usage**

```
nhl_draft_year(year)
```

**Arguments**

year	Draft year (XXXX)
------	-------------------

**Value**

Returns a data frame: \* year - \* round - \* pick\_overall - \* pick\_in\_round - \* team\_id - \* team\_name - \* team\_link - \* prospect\_id - \* prospect\_full\_name - \* prospect\_link -

**Examples**

```
try(nhl_draft_year(year=2020))
```

---

nhl_game_boxscore	<b>NHL Game Boxscore</b>
-------------------	--------------------------

---

**Description**

Returns information on game boxscore for a given game id

**Usage**

```
nhl_game_boxscore(game_id)
```

**Arguments**

game_id	Game unique ID
---------	----------------

**Value**

Returns a named list of data frames: team\_box, player\_box, skaters, goalies, on\_ice, on\_ice\_plus, penalty\_box, scratches, team\_coaches

**Examples**

```
try(nhl_game_boxscore(game_id=2021020182))
```

---

nhl_game_content	<b>NHL Game Content</b>
------------------	-------------------------

---

**Description**

Returns game content for a given game ID

**Usage**

```
nhl_game_content(game_id)
```

**Arguments**

game_id	Game unique ID
---------	----------------

**Value**

Returns a tibble

**Examples**

```
try(nhl_game_content(game_id=2021020182))
```

---

nhl\_game\_feed

**NHL Game Feed**

---

**Description**

Returns information on game feed for a given game id

**Usage**

```
nhl_game_feed(game_id)
```

**Arguments**

game\_id            Game unique ID

**Value**

Returns a named list of data frames: all\_plays, scoring\_plays, penalty\_plays, plays\_by\_period, current\_play, linescore, decisions, team\_box, player\_box, skaters, goalies, on\_ice, on\_ice\_plus, penalty\_box, scratches, team\_coaches

**Examples**

```
try(nhl_game_feed(game_id=2018020561))
```

---

nhl\_game\_shifts

**NHL Game Shifts**

---

**Description**

Returns information on game shifts for a given game id

**Usage**

```
nhl_game_shifts(game_id)
```

**Arguments**

game\_id            Game unique ID

**Value**

Returns a tibble

**Examples**

```
try(nhl_game_shifts(game_id=2021020182))
```

---

nhl_player_info	<b>NHL Player Info</b>
-----------------	------------------------

---

**Description**

Returns player information for a given player ID

**Usage**

```
nhl_player_info(player_id)
```

**Arguments**

player\_id      Player unique ID

**Value**

Returns a tibble

**Examples**

```
try(nhl_player_info(player_id=8476899))
```

---

nhl_player_stats	<b>NHL Player Stats</b>
------------------	-------------------------

---

**Description**

Returns player stats for a given player ID

**Usage**

```
nhl_player_stats(player_id)
```

**Arguments**

player\_id      Player unique ID

**Value**

Returns a tibble

**Examples**

```
try(nhl_player_stats(player_id=8476899))
```

---

nhl_schedule	<b>NHL Schedule</b>
--------------	---------------------

---

**Description**

Returns NHL Schedule data

**Usage**

```
nhl_schedule(season = NULL, day = as.Date(Sys.Date(), "%Y-%m-%d"))
```

**Arguments**

season          NHL Season  
day             Date

**Value**

Returns a tibble

**Examples**

```
try(nhl_schedule(season = 2023))
```

---

`nhl_teams`**NHL Teams**

---

**Description**

Returns NHL Teams information

**Usage**

```
nhl_teams()
```

**Value**

Returns a tibble

**Examples**

```
try(nhl_teams())
```

---

`nhl_teams_info`**NHL Teams Info**

---

**Description**

Returns NHL Teams information for a given team ID

**Usage**

```
nhl_teams_info(team_id)
```

**Arguments**

`team_id` A unique team ID

**Value**

Returns a tibble

**Examples**

```
try(nhl_teams_info(team_id = 14))
```

---

nhl_teams_roster	<b>NHL Teams Roster</b>
------------------	-------------------------

---

**Description**

Returns NHL Teams roster information for a given team ID

**Usage**

```
nhl_teams_roster(team_id, season = most_recent_nhl_season_api_param())
```

**Arguments**

team_id	A unique team ID
season	season in format XXXXYYYYY

**Value**

Returns a tibble

**Examples**

```
try(nhl_teams_roster(team_id = 14, season = 20202021))
```

---

nhl_teams_stats	<b>NHL Teams Stats</b>
-----------------	------------------------

---

**Description**

Returns NHL Teams stats information for a given team ID

**Usage**

```
nhl_teams_stats(team_id, season = most_recent_nhl_season_api_param())
```

**Arguments**

team_id	A unique team ID
season	season in format XXXXYYYYY

**Value**

Returns a tibble

### Examples

```
try(nhl_teams_stats(team_id = 14))
```

---

phf\_game\_all                    **PHF Game All**

---

### Description

phf\_game\_all: pull in the raw data for a game\_id from the PHF/NWHL API

### Usage

```
phf_game_all(game_id)
```

### Arguments

game\_id                    The unique ID code for the game that you are interested in viewing the data for

### Value

A named list of data frames: plays, team\_box, skaters, goalies, game\_details, scoring\_summary, shootout\_summary, penalty\_summary, officials, team\_staff, timeouts

### Examples

```
try(phf_game_all(game_id = 268127))
```

---

phf\_game\_details                **PHF Game Details**

---

### Description

phf\_game\_details: pull in the raw data for a game\_id from the PHF/NWHL API

### Usage

```
phf_game_details(game_id)
```

### Arguments

game\_id                    The unique ID code for the game that you are interested in viewing the data for

**Value**

A data frame with game team details

**Examples**

```
try(phf_game_details(game_id = 268078))
```

---

phf_game_raw	<b>PHF Game Raw</b>
--------------	---------------------

---

**Description**

phf\_game\_raw: pull in the raw data for a game\_id from the PHF/NWHL API

**Usage**

```
phf_game_raw(game_id)
```

**Arguments**

game\_id            The unique ID code for the game that you are interested in viewing the data for

**Value**

A list of data frames

**Examples**

```
try(phf_game_raw(game_id = 268078))
```

---

phf_game_summary	<b>PHF Game Summary</b>
------------------	-------------------------

---

**Description**

phf\_game\_summary: pull in the raw data for a game\_id from the PHF/NWHL API

**Usage**

```
phf_game_summary(game_id)
```

**Arguments**

game\_id            The unique ID code for the game that you are interested in viewing the data for

**Value**

A named list of data frames: scoring\_summary,shootout\_summary, penalty\_summary, officials, team\_staff, timeouts

**Examples**

```
try(phf_game_summary(game_id = 268078))
```

---

phf\_leaders

**PHF Player Leaderboards**

---

**Description**

PHF Player Leaderboards

**Usage**

```
phf_leaders(player_type, season = 2021, season_type = "Regular Season")
```

**Arguments**

player\_type        Player type: skaters, goalies

season             Season (YYYY) to pull the team stats from, the concluding year in XXXX-YY format

season\_type        Season type: Regular Season or Playoffs

**Value**

A data frame of stat leaders

**Examples**

```
try(phf_leaders(player_type = "skaters", season = 2022, season_type="Regular Season"))
try(phf_leaders(player_type = "goalies", season = 2022, season_type="Regular Season"))
```

---

phf\_league\_info      **PHF League Information**

---

**Description**

PHF League Information per year

**Usage**

```
phf_league_info(season = 2022)
```

**Arguments**

season              Season (YYYY) to pull the league info and IDs for. Season is the concluding year in XXXX-YY format

**Value**

A named list of data frames: seasons, divisions, teams, league, officials, brackets

**Examples**

```
try(phf_league_info(season = 2021))
```

---

phf\_pbp              *phf\_pbp*

---

**Description**

phf\_pbp: pull in the raw data for a game\_id from the PHF/NWHL API

**Usage**

```
phf_pbp(game_id)
```

**Arguments**

game\_id              The unique ID code for the game that you are interested in viewing the data for

**Value**

A data frame of play by play information

### Examples

```
try(phf_pbp(game_id = 268127))
```

---

phf\_player\_box      **PHF Player Boxscore**

---

### Description

phf\_player\_box: loads the player boxscore

### Usage

```
phf_player_box(game_id)
```

### Arguments

game\_id      The unique ID code for the game that you are interested in viewing the data for

### Value

A named list of data frames: skaters, goalies

### Examples

```
try(phf_player_box(game_id = 420339))
```

---

phf\_player\_stats      **PHF Player Stats**

---

### Description

phf\_player\_stats: loads the player stats

### Usage

```
phf_player_stats(player_id)
```

### Arguments

player\_id      The unique ID code for the player that you are interested in viewing the data for

**Value**

A named list of data frames: career, game\_log

**Examples**

```
try(phf_player_stats(player_id = 431611))
```

---

phf\_schedule

**PHF Schedule**

---

**Description**

PHF Schedule lookup

**Usage**

```
phf_schedule(season)
```

**Arguments**

season            Season (YYYY) to pull the schedule from, the concluding year in XXXX-YY format

**Value**

A data frame with schedule data

**Examples**

```
try(phf_schedule(season=2022))
```

---

phf\_standings

**PHF Standings**

---

**Description**

phf\_standings: pull in the standings data for a game\_id from the PHF/NWHL API

**Usage**

```
phf_standings(season = most_recent_phf_season())
```

**Arguments**

season            Season (YYYY) to pull the standings from, the concluding year in XXXX-YY format

**Value**

A data frame of standings data

**Examples**

```
try(phf_standings(season = most_recent_phf_season()))
```

---

phf_team_box	<b>PHF Team Boxscore</b>
--------------	--------------------------

---

**Description**

phf\_team\_box: loads the team boxscore and shot/score data for a game into one data frame through just one function

**Usage**

```
phf_team_box(game_id)
```

**Arguments**

game\_id            The unique ID code for the game that you are interested in viewing the data for

**Value**

A dataframe of team-level box score information

**Examples**

```
try(phf_team_box(game_id = 420339))
```

---

phf_team_roster	<b>PHF Team Roster</b>
-----------------	------------------------

---

**Description**

PHF Team Roster lookup

**Usage**

```
phf_team_roster(team, season = most_recent_phf_season())
```

**Arguments**

team	Team name with nickname (e.g. Boston Pride, Buffalo Beauts)
season	Season (YYYY) to pull the team stats from, the concluding year in XXXX-YY format

**Value**

A named list of data frames: roster, team\_staff

**Examples**

```
try(phf_team_roster(team = "Boston Pride", season = 2022))
```

---

phf_team_stats	<b>PHF Team Stats</b>
----------------	-----------------------

---

**Description**

PHF Team Stats lookup

**Usage**

```
phf_team_stats(team, season = most_recent_phf_season())
```

**Arguments**

team	Team name with nickname (e.g. Boston Pride, Buffalo Beauts)
season	Season (YYYY) to pull the team stats from, the concluding year in XXXX-YY format

**Value**

A named list of data frames: skaters, goalies

**Examples**

```
try(phf_team_stats(team = "Boston Pride", season = 2022))
```

---

<code>progressively</code>	<b>Progressively</b>
----------------------------	----------------------

---

**Description**

This function helps add progress-reporting to any function - given function `f()` and progressr `p()`, it will return a new function that calls `f()` and then (on-exiting) will call `p()` after every iteration.

**Usage**

```
progressively(f, p = NULL)
```

**Arguments**

- `f` a function to add progressr functionality to.
- `p` a progressr function as created by `progressr::progressor()`

**Details**

This is inspired by purrr's `safely`, `quietly`, and `possibly` function decorators.

**Value**

a function that does the same as `f` but it calls `p()` after iteration.

---

rds_from_url	<b>Load .rds file from a remote connection</b>
--------------	--

---

**Description**

**Load .rds file from a remote connection**

**Usage**

```
rds_from_url(url)
```

**Arguments**

url	a character url
-----	-----------------

**Value**

a dataframe as created by [readRDS\(\)](#)

---

update_nhl_db	<b>Update or create a fastRhockey NHL play-by-play database</b>
---------------	---

---

**Description**

update\_nhl\_db() updates or creates a database with fastRhockey play by play data of all completed and available games since 2011.

**Usage**

```
update_nhl_db(
  dbdir = ".",
  dbname = "fastRhockey_db",
  tblname = "fastRhockey_nhl_pbp",
  force_rebuild = FALSE,
  db_connection = NULL
)
```

**Arguments**

dbdir	Directory in which the database is or shall be located
dbname	File name of an existing or desired SQLite database within dbdir
tblname	The name of the play by play data table within the database
force_rebuild	Hybrid parameter (logical or numeric) to rebuild parts of or the complete play by play data table within the database (please see details for further information)
db_connection	A DBIConnection object, as returned by <a href="#">DBI::dbConnect()</a> (please see details for further information)

## Details

This function creates and updates a data table with the name `tblname` within a SQLite database (other drivers via `db_connection`) located in `dbdir` and named `dbname`. The data table combines all play by play data for every available game back to the 2010 season and adds the most recent completed games as soon as they are available for `fastRhockey`.

The argument `force_rebuild` is of hybrid type. It can rebuild the play by play data table either for the whole `fastRhockey` era (with `force_rebuild = TRUE`) or just for specified seasons (e.g. `force_rebuild = c(2019, 2020)`). Please note the following behavior:

- `force_rebuild = TRUE`: The data table with the name `tblname` will be removed completely and rebuilt from scratch. This is helpful when new columns are added during the Off-Season.
- `force_rebuild = c(2019, 2020)`: The data table with the name `tblname` will be preserved and only rows from the 2019 and 2020 seasons will be deleted and re-added. This is intended to be used for ongoing seasons because ESPN's data provider can make changes to the underlying data during the week.

The parameter `db_connection` is intended for advanced users who want to use other DBI drivers, such as `MariaDB`, `Postgres` or `odbc`. Please note that the arguments `dbdir` and `dbname` are dropped in case a `db_connection` is provided but the argument `tblname` will still be used to write the data table into the database.

## Value

Logical TRUE/FALSE

---

update\_phf\_db

**Update or create a fastRhockey PHF play-by-play database**

---

## Description

`update_phf_db()` updates or creates a database with `fastRhockey` play by play data of all completed and available games since 2011.

## Usage

```
update_phf_db(
  dbdir = ".",
  dbname = "fastRhockey_db",
  tblname = "fastRhockey_phf_pbp",
  force_rebuild = FALSE,
  db_connection = NULL
)
```

### Arguments

dbdir	Directory in which the database is or shall be located
dbname	File name of an existing or desired SQLite database within dbdir
tblname	The name of the play by play data table within the database
force_rebuild	Hybrid parameter (logical or numeric) to rebuild parts of or the complete play by play data table within the database (please see details for further information)
db_connection	A DBIConnection object, as returned by <code>DBI::dbConnect()</code> (please see details for further information)

### Details

This function creates and updates a data table with the name `tblname` within a SQLite database (other drivers via `db_connection`) located in `dbdir` and named `dbname`. The data table combines all play by play data for every available game back to the 2016 season and adds the most recent completed games as soon as they are available for `fastRhockey`.

The argument `force_rebuild` is of hybrid type. It can rebuild the play by play data table either for the whole `fastRhockey` era (with `force_rebuild = TRUE`) or just for specified seasons (e.g. `force_rebuild = c(2019, 2020)`). Please note the following behavior:

- `force_rebuild = TRUE`: The data table with the name `tblname` will be removed completely and rebuilt from scratch. This is helpful when new columns are added during the Off-Season.
- `force_rebuild = c(2019, 2020)`: The data table with the name `tblname` will be preserved and only rows from the 2019 and 2020 seasons will be deleted and re-added. This is intended to be used for ongoing seasons because ESPN's data provider can make changes to the underlying data during the week.

The parameter `db_connection` is intended for advanced users who want to use other DBI drivers, such as `MariaDB`, `Postgres` or `odbc`. Please note that the arguments `dbdir` and `dbname` are dropped in case a `db_connection` is provided but the argument `tblname` will still be used to write the data table into the database.

### Value

Logical TRUE/FALSE
