

## 1. Installation steps overview

Open the configuration file, include the library in the classpath, compile the class *FileBrowserConnector* and run the server.

## 2. Configurable parameters

***DN\_FILE*** This parameter can be found in the tab Additional parameters of the File Browser DS data source. The value of this parameter will be the used one for file element identifiers in the distinguished names.

***DN\_DIRECTORY*** Same as for *DN\_FILE* but in this case its values will be the one for directory element identifiers.

One mandatory requirement is that *DN\_FILE* must have a different value as *DN\_DIRECTORY*.
