

Infrastructure classes for high-throughput SNP data

Robert Scharpf and Benilton Carvalho

April 22, 2010

This document describes some of the infrastructure classes used for high-throughput genomic data. For the classes used to organize SNP data, we provide examples for initialization and illustrate some of the accessors. We should add a diagram showing the relationships of these classes here.

2 Locus-level classes

The examples below are completely simulated and are not meant to convey any biological plausibility.
